

PROJECT PITCH · AI AGENTS · WESTFÄLISCHE HOCHSCHULE

The job hunt, minus the **busywork**

An AI agent that finds German tech jobs, ranks them against your real experience, and writes a tailored CV and cover letter for each one — so applying takes minutes, not an evening.

4 boards

searched in one query

0–100

explainable match score

2 PDFs

CV + letter, per job

You submit

never an auto-apply bot

THE PROBLEM

Applying for jobs is a **second job**

Three things make the German job hunt exhausting — and all three can be automated without removing the human from the decision.

Fragmented

The same role sits on LinkedIn, StepStone, Xing and the Arbeitsagentur. You search four sites and read the same job four times.

Repetitive

Every serious application means rewriting your CV and cover letter for that posting. 30–60 minutes, each time.

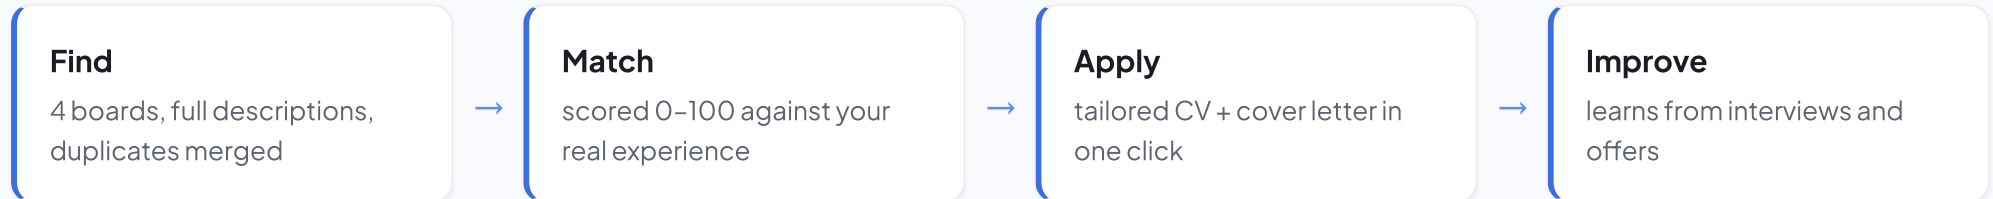

No feedback

You never learn which skills the market rewards, or which kind of application actually got a reply.

So people either spray generic applications everywhere — or burn out perfecting three. Both lose.

THE SOLUTION

One agent, the **whole loop**

Grounded in you

Upload your CV once and the AI turns it into a reviewed **experience base** — you confirm every entry. Every score and every document is built from what you have actually done. It never invents an employer, a date or a skill.

You stay in control

The agent prepares the application; **you** press submit. No stored job-board credentials, no terms-of-service violations, nothing sent without a human read.

THE DEFINING DESIGN DECISION

An assistant — not an auto-apply bot

The most requested "feature" in this space is the one we deliberately refused to build.

It would be reckless

Automatic submission breaks job-board terms of service, needs your login credentials stored somewhere, and breaks the day a form or bot-check changes.

It would also fail you

Applications fired off without a human read are exactly the low-effort spam recruiters filter out. Volume was never the bottleneck — quality per application is.

So we built the Apply Assistant

Tailored CV, cover letter, the posting link and a pre-submit checklist, prepared in one click. You review and send in under a minute.

The busywork disappears. The judgement stays human.

- The **full description** of every posting is fetched — the fuel for everything downstream
- Skills extracted from a curated German/English taxonomy
- Fuzzy matching merges the same role across boards into a single entry
- Applications tracked through wishlist → applied → interview → offer

The screenshot shows the 'keinplankarriere / jobs' web application. The top navigation bar includes 'keinplankarriere', 'Jobs' (active), 'Experience', 'Trends', and 'Settings'. On the right, it shows '138 jobs tracked', a 'Clear all' button, and a 'Refresh' button. Below the navigation bar is a 'SEARCH JOBS' section with a text input for 'Job title (e.g. Python Developer)...', a location dropdown set to 'Nordrhein-Westfalen', and a 'Search' button. Below the search bar are four source filters: 'LINKEDIN', 'STEPSTONE', 'XING', and 'ARBEITSAGENTUR'. The 'Matching' section shows '106/138 scored · AI refinement on' and two buttons: 'Score all jobs' and 'Score new only'. Below this is a summary row with five boxes: '138 TOTAL JOBS', '136 WISHLIST', '2 ACTIVE', '0 OFFERS', and '0 REJECTED'. At the bottom is a filter bar with a search input 'Search title or company...', and four dropdowns: 'All sources', 'All types', 'Score (high first)', and 'Min score'. Below the filter bar is a table with columns: JOB, LOCATION, SOURCE, REMOTE, SCORE, and STATUS. The first row of the table is for 'TypeScript Fullstack Developer (m/w/d)' at 'thor consulting GmbH' in 'Troisdorf, Nordrhein-Westfalen', sourced from 'ARBEITSAGENTUR', with a status of 'on-site', a score of '93', and a status dropdown set to 'interview'.

- Your CV photo, your prompt add-ons, your own template

It always produces a valid PDF

Documents are compile-validated with Tectonic. If a tailored version fails, it repairs once, then falls back to your known-good template.

The screenshot shows the 'keinplankarriere' website interface. At the top, there's a navigation bar with 'Jobs', 'Experience', 'Trends', and 'Settings'. A status bar indicates '138 jobs tracked' with 'Clear all' and 'Refresh' buttons. The main content area is a modal window for a job match titled 'TypeScript Fullstack Developer (m/w/d)'. The job is from 'thor consulting GmbH' in 'Troisdorf, Nordrhein-Westfalen', categorized as 'ARBEITSAGENTUR' (red), 'on-site', with a score of '93', and an 'Interview' button. Below the title, there's a 'View original posting' link and a note 'Also posted on: XING'. The 'SKILLS & TECHNOLOGIES' section lists various skills in blue buttons: API, Docker, Express, JavaScript, Node.js, REST, React, Redis, SQL, and TypeScript. The 'MATCH DETAILS' section shows a large '93' score with 'AI-SCORED' and a text box explaining the fit: 'Strong fit due to direct TypeScript experience, overlap in React/Express/Node.js/Docker skills, and relevance to full-stack development, though on-site requirement in Troisdorf may slightly reduce preference alignment.' Below this, a green box highlights a '+8 re-rank boost' for matching skills from past responses (api, docker, express, javascript, node.js, react, redis, rest, sql, typescript). At the bottom, a progress bar shows 'Skills' at 22.5/45, 'Role' at 20/20, and 'Location' at 2.0/2.0. The background shows a sidebar with 'SEARCH JOBS', 'Matching' (106/138 scored), and '138 TOTAL JOBS'.

MARKET TRENDS

Aggregated across your tracked jobs — what the market is asking for.

[Analyze](#)**138**

Jobs analyzed

52

Remote

9

Hybrid

77

On-site

The job market snapshot shows 138 available jobs with a strong presence in Nordrhein-Westfalen, particularly in Köln and Düsseldorf. Top skills include programming languages such as TypeScript, Java, and JavaScript, as well as related technologies like React and API. The majority of jobs are on-site, with a smaller number of remote and hybrid options available.

ONE DOCKER IMAGE

FastAPI · SQLite · React · Tectonic

A FastAPI backend serves the built React dashboard and an embedded SQLite database; pure requests + BeautifulSoup scrapers; Tectonic turns LaTeX into PDFs. Any OpenAI-compatible LLM plugs in.

Python 3.12

FastAPI

SQLite

React 18 + Vite

Docker Compose

Multi-user by design

Each visitor gets an isolated workspace via a cookie session; all heavy work runs through one serial queue with a live “position in line”; visitors bring their own LLM key, so no credentials are shared.

Deterministic first

Deduplication, skill extraction and the base score are plain Python — fast, free and reproducible. The LLM is reserved for judgement: reading CVs, refining top matches, writing documents.

Resilience, learned the hard way

- Self-healing model choice when a provider retires a model mid-request
- Compile-validated documents with fallback to a known-good template

From zero to an **AI** career agent

Sprint 1

Four scrapers, API, dashboard, application tracking — in Docker from day one.

Sprint 2

Skill extraction, deduplication, hybrid scoring, the experience base.

Sprint 3

Full descriptions, CV + cover-letter generation, Apply Assistant, trends.

Sprint 4

Multi-user sessions, work queue, bring-your-own-key, public packaging.

Website, code, deck and a one-command Docker setup — everything a reviewer needs to run it.
